

Hostile MRB — Bob Fleet tray weekly remaining + machine tiles (2026-09-19)

Repo: SimonBarnett/agentic_build

FR: docs/feature-request-bob-fleet-tray-weekly-machine-tiles-2026-09-19.md (park 7e8797e)

HEAD reviewed: c31b0ed Tray: weekly remaining bar + machine tiles (FR T1-T7)

Surface: Watch-BobTray.ps1, Get-BobTrayHover.ps1, Get-BobBoxUsage.ps1, bob-fleet-tray / box-usage skills

Evidence: ionos live hover 2026-09-19 ~22:04 BST; unified.jsonl creditUsagePercent=52; BT0 15/0;

docs/uat-bob-fleet-tray-weekly-machine-tiles-2026-09-19.md

Verdict

PASS for locked FR T1-T7 (code + BT0 + live hover object). Not a cross-host job peek. Human eyeball of the WinForms card after Watch-BobTray recycle is still required. Bob may declare **ready for human UAT** after the live card is seen.

Locked rules vs this push

Lock	Required	Evidence
Primary bar	CLI Weekly limit left: N%, not session 233K/500K	remaining_kind=weekly; Get-BobWeeklyRemaining from last billing: fetched credits config
Do not invent %	n/a if field missing	null without creditUsagePercent AND weekly period type; monthly rejected
Title	Bob Fleet, not Bob (ionos)	live title=Bob Fleet; Get-BobTrayTitle is constant
Tiles	Machine heading, jobs underneath	live jobs_text: ionos then indented job line
Job label	GitHub owner/repo, never bare SHA	live SimonBarnett/agentic_build; SHA-leaf cwd paints ?

T1-T7

ID	Result	Notes
T1	PASS	Title Bob Fleet. Watch-BobTray no longer paints Bob (<id>).
T2	PASS	Machine tiles; this host first; empty tile 'no jobs'. BT0l two-machine fixture: testhost then otherhost, running before queued.
T3	PASS	git remote origin slug. Live SimonBarnett/agentic_build, not commit SHA.
T4	PASS	Caption Weekly remaining. Live 48% from 52% used. Unknown hides track. 0% empty track no fill.
T5	PASS (b)	Local-store honesty: other hosts not in this store. No WinRM. Peer JSON in the same store still tiles (BT0l otherhost).
T6	PASS	Live short 'P+ 1 run 48%' (under 63). Percent omitted when unknown.
T7	PASS	Park-once / ShowParkedAt unchanged. BT0m + BT0n green.

Evidence

E1 — live hover (ionos, this job)

title=Bob Fleet

scope=local-store

short=P+ 1 run 48%

remaining_pct=48

remaining_kind=weekly

jobs_text:

ionos

SimonBarnett/agentic_build 5m running

other hosts not in this store

Get-BobBuilds -Lane running is job 21c8450f cwd C:\ai\agentic_build. Repo label is origin slug, not the job id.

E2 — weekly field (real CLI log, not invented)

Last ~/.grok/logs/unified.jsonl line billing: fetched credits config: creditUsagePercent=52.0, currentPeriod.type=USAGE_PERIOD_TYPE_WEEKLY, remaining=round(100-52)=48. Get-BobBoxUsage text: Weekly: remaining 48% (used 52%). No auth.json. No billing HTTP. Session usage.json is not the bar.

E3 — Test-Pack

tools/Test-Pack.ps1 **BT0 15 pass / 0 fail**. BT0l: Bob Fleet title; weekly n/a hide fill; 91% used => 9% remaining; missing creditUsagePercent => null; monthly => null; missing period type => null; owner/repo job line; SHA cwd not leaked; two machine tiles; running before queued. BT0m/BT0n cover T7.

E4 — skills

bob-fleet-tray and box-usage rewritten: weekly bar primary, context optional on the job object only, badge alert: watcher|stall|weekly|none, recycle Watch-BobTray only.

Non-conformances

None against locked T1-T7.

Nits (not blockers)

- **WinForms card not eyeballed in this session.** Hover object and paint path match. Operator still needs to mouse-over / left-click the robot after recycle.
- **Watch-BobTray was down at UAT** (BobFleet-ionos Ready, no tray process). Recycle starts the STA script only. Do not Stop-ScheduledTask BobFleet-* while 21c8450f runs.
- **Two Watch-BobJobs.ps1 (non-Once) processes** were already present. Out of scope. Left running.
- **Weekly % lags the CLI footer** until grok.exe writes another billing: fetched credits config line. Documented. Do not scrape a second source.
- **NC-05 id8** from the old fleet-claim MRB is intentionally gone from the visible line. This FR says owner/repo duration state. id8 remains on the job object.

Fail bar (checked, not hit)

- Bar using session context 233K/500K
- Invented 100% / 0% when billing field missing
- Title Bob (ionos)
- Job line primary label is a commit SHA
- Stop-ScheduledTask BobFleet-* while a job runs
- auth.json or billing HTTP

Ops

Recycle **Watch-BobTray.ps1 only** (hidden STA). Never Stop-ScheduledTask BobFleet-* while jobs run.

Non-claims

Not a remote multi-host store. MarchHare jobs will not appear on ionos until they share a store or a documented peek exists. Not a redesign of the FA robot. Not a replacement of the Grok CLI footer.
