

Hostile MRB — invite-airc chair one-liner (2026-09-19)

Repo: SimonBarnett/agentc_irc

Tip: 978e12a feat: --chair prints copy-paste thin invite (v0.2.1)

Spec: docs/feature-request-invite-airc-2026-09-19.md

Plan: docs/build-and-test-plan-invite-airc.md

Skill: .grok/skills/invite-airc/SKILL.md

UAT log: docs/invite-airc-uat-2026-09-19.md

Machine: ionos

Reviewer: originating build agent (standing order 2026-09-19) → Bob

Verdict

PASS-with-nits on I1–I7 and plan P0–P3. Live IONOS chair+thin PIN pair used the printed one-liner; sealed exec hostname returned WIN-MPRE8VI4U6U. Long-term PSK was not on IRC. Win95 TLS is still not claimed.

Not the Bob phrase **ready for human UAT**. Bob owns that stamp. This review recommends granting it for the invite one-liner on Win8+ / Server 2012+ Schannel only.

Locked gates

ID	Rule	Disposition
I1	Skill invite-airc in .grok/skills/invite-airc/SKILL.md	Pass. Ritual matches. Workaround “compose the line yourself” is gone.
I2	--chair stdout includes copy-paste thin line --pin --channel --moot + TTL	Pass. Live line has no INFO prefix. expires 10m present. PIN redacted in docs.
I3	Thin happy path is that one line after copying the folder; self-heal	Pass coded. Same-box UAT appended --nick/--home. Walrus USB copy not run.
I4	No long-term PSK on IRC; PIN wrap/GRANT unchanged	Pass. No psk= in logs. GRANT still AES-256-GCM. operators=cm-inv.
I5	README + agentc-irc / agentc-moot cross-links	Pass.
I6	Offline selftest banner contains --pin and --moot (fixture PIN ok)	Pass. Fixture 482917 only. pytest asserts tokens.
I7	Win95 TLS not claimed	Pass. Usage, README, OS matrix, skill, this MRB.

Plan phases

Phase	Claim	Evidence
P0 skill + README	Done	invite-airc, README, agentc-irc, agentc-moot
P1 --chair one-liner	Done	chair_invite_line / chair_print_banner; live stdout
P2 offline selftest	Done	selftest chair invite banner ok; 123 passed, 1 skipped
P3 UAT + MRB to Bob	Done	docs/invite-airc-uat-2026-09-19.md + this file

What was actually run

Offline: airc-moot-thin.exe --selftest (0.2.1, ptr=4); pytest -q with AIRC_MOOT_THIN_EXE. Live: IONOS #cm-bob-oscar. Chair cm-inv --chair --once. Thin ran the printed command (PIN redacted). GRANT, joined as cm-inv pin=ok, operators=cm-inv. Sealed exec hostname job 5f3f90d778ec59c5 → WIN-MPRE8VI4U6U. CI did not open Libera. Live PIN and connector.key not committed. Fixture PIN 482917 only in tests/docs.

Live invite line (PIN redacted)

```
airc-moot-thin.exe --pin REDACTED --channel "#cm-bob-oscar" --moot d3a6414017ede995
```

Brutal notes (not blockers for this FR)

- 1 **Same-box is not the field ritual.** Plan allows second nick or walrus. This UAT used a second nick on IONOS with extra --nick/--home. It does not prove a USB drop onto walrus with zero extra flags.
- 2 **C chair cannot send DUMB jobs.** Hostname smoke used Python irc_agent as cm-inv after --once GRANT-exit. Out of scope. Do not pretend --chair is an operator console.
- 3 **irc_agent.protect_path(home)** vs a raw 32-byte key: UAT harness hit Win32 ACL denial. Product C path is fine. Do not "fix" Mode 1 protect in this ticket.
- 4 **Rolling release lag.** Immutable airc-moot-thin-v0.2.1 exists only after green mode3-thin-release.yml. Do not assume GitHub assets already match 978e12a.
- 5 **Channel quoting.** Invite quotes "#chan" for PowerShell. Operators who strip quotes in PowerShell still lose the channel. Skill keeps the quotes.

Fail bar check

Fail example	This ticket
ok=true without the gate	Hostname JSON has ok, rc, stdout; thin log has the job id
Invented APIs	Reused PAIR GRANT / DUMB v1
Breaking prior versions	Mode 1/2 Python untouched; air-gap --key still present
Secrets in repo	No live PIN, no PSK, no connector.key
Win95 claim	None

Required follow-ups (ordered)

- 1 **Bob:** stamp or refuse ready for human UAT for the invite one-liner on modern Schannel only.
- 2 **Nit:** confirm GitHub rolling mode3-thin / immutable airc-moot-thin-v0.2.1 after CI.
- 3 **Nit (optional field):** walrus USB copy with only the printed line if Simon wants that row closed.

No ordered product code fixes. Do not reopen PIN wrap/GRANT. Do not add a GUI PIN dialog.

Non-claims

Windows 95 / 98 / NT4 / XP live Libera. Replacement of --key air-gap. Phase 5 .NET live 2012 smoke. Bob's ready for human UAT phrase (recommended, not stamped here).

Sign-off

Build-agent hostile MRB → Bob — 2026-09-19 Europe/London — tip 978e12a — **PASS-with-nits**. Recommend ready for human UAT of invite-airc on Win8+ / Server 2012+ Schannel. Win95 still blocked.
