

Hostile MRB - Bob Fleet system tray watcher (2026-09-19)

Hostile MRB " Bob Fleet system tray watcher (2026-09-19)

Repo: SimonBarnett/agentc_build

Surface: `tools/Watch-BobTray.ps1`, `src/Public/Get-BobTrayHover.ps1`, `tools/Get-BobBoxUsage.ps1 -Hover`

HEAD reviewed: `b1e856b` (Tray: FA robot icon, context remaining bar, jobs show machine)

Evidence: live hover on MarchHare 2026-09-19 ~19:28 BST; operator screenshots (robot + dark card; Grok CLI weekly limit 9%); ionos Mode-3 job `9f96bc0e` running on `SimonBarnett/agentc\_irc` while MarchHare tray idle.

Verdict

FAIL " not ready for human UAT as a *fleet* monitor.

The robot icon and dark card ship. The product claim in the UI ("Bob fleet" / "No fleet jobs running") does **not** match the data model. Context remaining is session-window math when `usage.json` exists; when it does not, the UI still draws a near-empty bar that operators read as "almost out" and confuse with Grok CLI **Weekly limit left**.

Evidence

E1 " MarchHare live `Get-BobTrayHover` (this box)

```
{
  "short": "SG idle",
  "body": "SG context remaining --\nno fleet jobs running",
  "remaining_pct": null,
  "remaining_kind": "context",
  "job_count": 0,
  "queued": 0,
  "jobs": [],
  "tier": "SG"
}
```

`Get-BobMachines` on MarchHare lists only `marchhare` / `marchhare-bugtest`. No ionos row. `Get-BobBuilds -Lane running` is empty locally.

E2 " Operator fact

Jobs **are** running on ionos (`agentc\_irc` Mode 3 / related). Operator on MarchHare sees tray title **Bob fleet** and body **No fleet jobs running**. That is a false negative for any reasonable reading of "fleet".

E3 " Quota vs context

Grok CLI footer on a session: **Weekly limit left: 9%**. Tray card labels the bar **Context remaining**. Code path `Get-SessionContextRemaining` uses `usage.json` `(inputTokens - cachedReadTokens)` vs `models\_cache` context_window (default 500000). It never reads weekly quota. Operators still equate the empty-looking bar with the 9% weekly figure. When `remaining\_pct` is null, the painted bar must not look like ~0% remaining.

E4 " Code citations (failing behaviour)

- `Get-BobTrayHover`: only `Get-BobBuilds -Lane running` on **this** BobBridge store; still emits `no fleet jobs running`.
- `Watch-BobTray.ps1` `Update-Hover`: title always `Bob fleet`; empty jobs " literal `No fleet jobs running`; bar caption `Context remaining` even when `\$script:remainingPct` is null.
- Low-context pulse: fires when `remainingPct -lt 10` " correct *if* metric is real; dangerous if null is coerced or bar mis-drawn.

Non-conformances (ordered fixes)

NC-01 (blocker) "Fleet" is local-only

****Fail:**** UI claims fleet-wide visibility; data is per-machine BobBridge lanes only.

****Required:****

1. Rename idle copy to honesty: e.g. `No jobs on this machine` (not "fleet"), ****or****
2. Implement true multi-machine hover: aggregate running jobs from every registered legion host the operator can see (ionos + marchhare + ??????), with machine column already present on job lines.
3. Title: `Bob fleet` only if (2); else `Bob (marchhare)` / `Bob (<machineId>)` matching the host.

Prefer (2) if the bridge already has cross-host records; if not, add a read-only peek of peer machine job stores / health endpoints documented in `docs/`. Do not invent remote APIs ?????? use existing BobBridge artefacts.

NC-02 (blocker) ?????? "Null context must not look depleted"

****Fail:**** With `remaining\_pct: null`, card still shows a near-empty/red-looking bar; operators read "~0% left" and mix it with weekly 9%.

****Required:****

1. When remaining is unknown: bar ****indeterminate or fully muted/hidden****, caption `Context remaining ??????` / `n/a` (match hover body `--`).
2. Never fill 0% unless computed remaining is actually 0 from `usage.json`.
3. Unit/script test: hover with no running jobs ?????? `remaining\_pct` null ?????? tray paint path does not set fill width as empty-depleted.

NC-03 (major) ?????? "Surface weekly quota separately or not at all"

****Fail:**** Product copy and operator mental model collide (CONTEXT bar vs CLI weekly limit).

****Required:****

1. Keep context = session window only (current formula OK when `usage.json` exists).
2. Add optional second line ****Weekly limit**** only if CLI/settings expose a real field ?????? ****do not invent****. If unavailable, document in hover skill: tray does not show weekly %; read CLI footer.
3. Update `.grok/skills/bob-fleet-tray/SKILL.md` and `box-usage` so agents never claim weekly from the context bar.

NC-04 (major) ?????? "Red badge semantics"

****Fail:**** Red badge present while idle + null context; unclear if stall alert vs context pulse.

****Required:****

1. Document badge sources: stall `ACTION\_REQUIRED` vs context <10% vs watcher down.
2. Do not pulse context when `remaining\_pct` is null.
3. Prefer distinct badge colour or tooltip line: `alert: watcher|stall|context`.

NC-05 (nit) ?????? "Duplicate / stale job lines"

If multiple lane records share one live `grok.exe`, collapse or show `jobId8` so three identical `ionos ??????? agent\_irc ??????? running` lines are diagnosable. Include `id8` in the visible tray line (hover body already has it; WinForms card currently drops it).

Pass bar (next MRB)

- Operator on MarchHare can see ionos running jobs ****or**** UI never says "fleet" when it cannot.
- Null context ?????? depleted bar; screenshot/test proof.
- Skills state context vs weekly clearly.
- Badge/pulse never treats unknown as <10%.
- Offline Test-Pack or focused tray tests cover NC-02 at minimum.

Non-goals this ticket

- Redesigning FA robot artwork.
- Stopping in-flight ionos Mode-3 build.
- Inventing weekly-limit APIs the CLI does not expose.

Hand-off

Build agent on ****ionos****: implement NC-01??????NC-04 in priority order; commit + push `agentic\_build`; leave Mode-3 `agentic\_irc` job alone. Bob re-MRBs after push.
