

HOSTILE MRB - AGENTIC_IRC MOOT/FILE/DUMB (2026-09-19)

Job: c312ec14 on ionos

Range: 1a11e98..47931b4

Evidence: `pytest -q ->` 68 passed, 2 skipped (re-run on IONOS). Gap doc: docs/gap-vs-feature-request-2026-09-19.md.

Verdict

FAIL - not ready for human UAT.

This pass was a real, useful gap-close (docs + thicker section 12 offline tests + small FILE/dumb fixes). It is not a complete PDF acceptance. The build agent correctly refused to self-declare UAT-ready. Bob agrees: do not ship as done.

Sub-verdict on the *dispatch ticket* (gap doc + strengthen thin tests + honest .NET status): PASS-with-nits - that ticket's definition of done was met.

What landed (credit where due)

- Honest gap matrix vs PDF section 12 / Appendix C.
- W1-W6, M1-M7 (incl. 3-nick non-floor via `handle_privmsg`), F2-F8, most of D1-D10 offline.
- FILE DONE path hashes before complete/; ABORT; disk-cap refuse.
- Dumb: jail/UNC/secret names, timeout monkeypatch, meta chars, prefix drop.
- Status + README no longer claim "not started"; .NET called a stub; `airc-dumb.cmd` added.
- No Libera from pytest.

Blockers (must fix before Bob says ready for human UAT)

Ordered by PDF severity:

1. Tier S AIRC-FILE envelope (section 5.2) - offer still seals raw bytes. Spec is explicit. F1 remains Partial until envelope encode/decode + basename jail are real.
2. `dumb_agent.py` listen loop - main is INFO no-listen. PDF Feature C wants a connector process that joins the channel. In-process runner + `dumb_ctl` is not the same deliverable.
3. D2 on the wire - unknown operator must not produce a result box; today the IRC path only INFO-logs and does not exercise the full deny-on-wire story the PDF describes for the connector.
4. Truncated exec spill - 8 KiB JSON truncate without `dumb/results/<id>.txt` spill when truncated.

.NET Phase 5 may slip per the PDF ("phases 0-4 even if .NET slips") only if the Python connector is actually a listen/join connector. With no-listen, slipping .NET does not buy a Server 2012 story or a modern dumb daemon.

Treat .NET as deferred after Python listen works - or explicitly waive Feature C daemon scope in a Simon-signed note (not done).

Nits (non-blocking for a follow-up ticket)

- YIELD * sets floor=None vs Table 3 prose "returns to chair".
- FLOOR_IDLE_S skill-only (PDF allows).
- Skills / install_skill not locked by pytest.
- Manual Libera section 12.6 human-only (correct).
- Feature-request md shows encoding mojibake in places (fix if touching the file).

Required fixes for next build agent

1. Implement AIRC-FILE v1 envelope for tier S (encode on offer, decode on receive, basename regex, hash/length gate).
2. Implement dumb_agent.py connect/join/flood/CAPA/job loop (stdlib socket+ssl), keep jail/PSK behaviour; offline tests via injected handle_privmsg / fake socket where needed.
3. Prove D2: unknown operator -> no exec + no result ciphertext on the wire (in-process connector path).
4. On truncated stdout/stderr: write dumb/results/<id>.txt and set truncated: true in JSON.
5. Re-run pytest -q; update gap doc; do not claim UAT.

Optional later: Phase 5 .NET protocol clone; YIELD * -> chair; skill pytest smoke.

Evidence

Check Result

--- ---

pytest -q on IONOS post-pull 68 passed, 2 skipped
Diffstat vs pre-dispatch +595 / -35 across 14 files
Libera in CI Not introduced
Self-declared UAT No

Bob: not ready for human UAT. Re-dispatch with the blocker list above.
