

HOSTILE MRB V2 - AGENTIC_IRC MOOT/FILE/DUMB (2026-09-19)

Job: 71588c82 on ionos

Range: aee2e46..976e4fc

Prior MRB: [mrb-2026-09-19-v1.md](./mrb-2026-09-19-v1.md) (FAIL - blockers 1-4)

Evidence: pytest -q -> 78 passed, 2 skipped (re-run on IONOS after pull).

Verdict

PASS - ready for human UAT (Python field kit / phases 0-4).

MRB v1 blockers 1-4 are closed with offline evidence. Per the feature PDF, Phase 5 .NET may slip; Python listen is now real. Human UAT is the Libera manual session (tests/MANUAL.md / section 12.6) plus any operator check on a real dumb host.

Sub-verdict on the dispatch ticket (blockers 1-4 only): PASS.

Blocker close-out

MRB v1 blocker Status

--- --- ---

1 Tier S AIRC-FILE v1 envelope Closed. Encode on offer; decode + basename jail + hash/length gate on receive; F1 tests assert envelope (not raw SEAL).

2 dumb_agent.py listen loop Closed. stdlib socket+ssl connect/join/flood/CAPA/job; no-listen gone; offline fake-socket test.

3 D2 on the wire Closed. test_d2_unknown_operator_no_result_on_wire: no subprocess.run, no DUMB/PRIVMSG result.

4 Truncated exec spill Closed. dumb/results/<id>.txt + truncated: true when over 8 KiB.

What still is not done (nits / deferred - do not block UAT of Python kit)

1. Phase 5 .NET protocol clone - still INFO+exit 0 stub. Allowed to slip after Python listen. Server 2012 story remains open until this lands.

2. YIELD * - still floor=None vs Table 3 "return to chair" prose.

3. FLOOR_IDLE_S - skill-only (PDF optional).

4. install_skill / skill text - not pytest-locked.

5. AGPK-mode dumb jobs - connector is PSK default; SEAL-v2 job unwrap on connector not this pass (gap doc note).

6. Manual Libera - human-only; that *is* the UAT surface.

Evidence

Check	Result
-------	--------

--- ---

pytest -q on IONOS	78 passed, 2 skipped
--------------------	----------------------

Diffstat vs MRB v1 HEAD	+668 / -36 across 10 files
-------------------------	----------------------------

Libera in CI	Not introduced
--------------	----------------

Self-declared UAT by build agent	No (correct)
----------------------------------	--------------

Bob: ready for human UAT on the Python moot/file/dumb field kit. Do not claim Server 2012 / airc-dumb.exe until Phase 5. Next optional build: .NET protocol clone only if Simon wants that host story closed.
